Please delete the Abstract of the Disclosure section on page 25 in its entirety and add the following Abstract of the Disclosure section:

ABSTRACT OF THE DISCLOSURE

A base station provide wireless communication of digital signals over a plurality of communication paths. The digital signals are communicated using at least one radio frequency channel via Code Division Multiple Access (CDMA) modulated radio signals. The base station includes a wireless transceiver for establishing a communication session over a first digital communication path, and a bandwidth management module is connected to the wireless transceiver for allocating a plurality of code channels within the at least one radio frequency channel for exchanging digital signals over the first digital communication path during the communication session. The plurality of code channels include at least one traffic portion that is established for a predetermined time and at least one control portion that is continuously available. A number of code channels allocated to the traffic portion change during the communication session based upon bandwidth requirements. The bandwidth management module reallocates the at least one traffic portion from the first digital communication path to a second digital communication path if an extension of time is not requested from the base station over the first digital communication path for the at least one traffic portion, or if the base station no longer has digital signals to transmit over the first digital communication path via the at least one traffic portion. However, the at least one reallocated traffic portion appears

as though it is still continuously available to the first  
digital communication path.
